ODE is a subsidiary of DORIS
a leading engineering services
provider in the energy industry.

Asset Management

ode

A DORIS Group Company

think safety the design safety ode way deliver safety

ODE provides life of field asset support as part of a fully integrated asset and field development engineering and technical support service. Every asset undergoes the same basic lifecycle which begins with conceptual ideas moving then to detailed design, construction, installation, commissioning, operation and into late life.

As part of the DORIS Group, ODE has 50 years experience of managing the full process for clients in the North Sea and beyond and has for the last 15 years provided a class leading operational and production service to clients assets with an enviable record of safety, efficiency, uptime and profitability.

The ODE approach is to always look for the smarter more efficient way to drive real value into our operations and ensure our service is fit for purpose and tailored to meet all of the clients expectations.

Experience and good planning are fundamental to the process and the proven capability to successfully manage an asset from installation through to a full production cycle and into decommissioning comes with ODE's smarter way commitment.

ODE fosters a culture of collaboration within the supply chain which is vital to meeting the demands of the industry to lower OPEX and CAPEX costs whilst at the same time improving efficiency. This is achieved, without compromise to safety or quality and is promoted throughout the workplace.

Amongst the core offerings we include;

- Operating on behalf of client
- Duty holder
- Providing due diligence to our clients
- Operational availability
- Asset integrity
- Production optimisation
- MOC & brownfield engineering
- Operations & maintenance service
- Shut downs
- Rationalisation and de-bottlenecking
- Logistics
- 3rd party management

ode
A DORIS Group Company

- 99.7% asset availability
- 15 yrs of zero LTI's
- Zero environmental incidents
- +/- 0.5% cost budget variance
- Virtually zero maintenance backlog
- Production continually exceeding targets
- Exceptional client FPAL feedback

We believe there is a smarter way

Commitment

ODE is committed to being a collaborative, engaged and focussed partner in the provision of an integrity and production lifecycle solution for clients assets with a fully scalable innovative model that meets industry needs today and into the future.

Operational Models

ODE 's smarter way challenges the industry norms and developed models to suit all scales of operation ensuring maximum efficiencies and cost reductions.

Proactive Maintenance

ODE utilises a computerised maintenance management system, compiling historical data on all maintenance activities to assess where to focus routine maintenance. This ensures a proactive rather than reactive approach, maximising platform availability whilst removing unnecessary maintenance.

Production Availability

ODE's track record demonstrates effective planning and proactive maintenance work, with availability figures to rival similar service providers, irrespective of the size of operation.

Integrity Management

ODE is an industry leader in maintaining assets with virtually zero maintenance backlog, particularly in respect to Safety and Environmental Critical Elements which are paramount to the integrity of the asset. This is complimented by the inclusion of strategic partnerships for specialist services.

Resource Rationalisation

ODE manages budgets for its clients through the use of multi-skilled and mobile offshore crews. Additionally, onshore operations support and engineering teams are utilised across several projects. Both on and offshore teams therefore form a shared resource available to multiple clients as required minimising the need for many full time personnel.

Effective asset management improves financial performance

Only by understanding the true condition of an asset can effective management decisions can be made, driving reliability, efficiency and profitability. ODE can assist in identification and initiate steps to rationalise and de-clutter in order to optimize uptime and reduce costs.
